Specialising in design, drafting,
fabricating & installation for the
Coal Mining Industry

OEM Support Service

Jet Engineering's OEM Support Service is an integrated design, manufacturing and project management service, designed to make local customisation of new earthmoving equipment easier and more cost effective.

The service typically encompasses handrail modifications, access ladders, fire suppression system mounts, lighting brackets, two way radio brackets, and all of the other ancillary components that are fabricated locally to meet site specific customer requirements.

Benefits

The key benefits that the service delivers to our customers are as follows:

- Cost savings - through shorter build cycles and smaller build crews
- Ease of pre-planning - all components can be pre-ordered by part number from a picking list
- Cost certainty – component prices are known in advance and can be quoted to customers when customisations are requested
- Repeatability – all components are fabricated to manufacturing standards and can be accurately reproduced whenever required
- Consistency – using the same components each time allows wiring looms, etc. to be pre-manufactured, saving time and money on site
- All components are shop manufactured instead of site fabricated, providing the twin benefits of superior quality and improved finish
- All parts are drafted and allocated part numbers which allows for easy inclusion in spare parts manuals

Services Offered

The services supplied can include any or all of the following elements:

Design and Drafting

- Measuring and drafting of existing component designs
- Modification of existing component designs
- Design of new components

Systemisation

- Establishment and maintenance of a component register
- Supply of updated drawings in electronic format on a regular basis
- Establishment of picking lists for ease of ordering
- Management of modification requests from build managers

Jet Engineering - The Benchmark in Machine Customisation

address Shed 1, 3b David Muir Street

Coal Mining Industry

Installation

- Installation of components on site (Jet Engineering has two fully equipped, mine site compliant site units)
- Capturing of modifications and new components during the build

Confidentiality

Our focus is building long term business relationships with our customers. To achieve this, we recognise that our service needs to meet with your requirements. To this end:

- All components are supplied unbranded, or branded with your details
- Confidentiality is maintained at all times
- Ownership of IP remains with your business at all times
- All drawings are completed on your drawing template, and electronic copies are provided to you on a regular basis
- We'll only sell these components to you. Any approaches from other entities will be redirected to the appropriate person in your organisation

At Jet Engineering we pride ourselves on acting with integrity at all times.

Further Information

Please contact the friendly team at Jet Engineering to find out more about how our OEM Support Service can add value to your organisation.
